The mission of the International Society of Radiology (ISR) is ‘to facilitate the global endeavours of the member organisations to improve patient care and population health through medical imaging’.

To this end, the ISR formally established the **Quality and Safety Alliance (ISRQSA)**, which is responsible for the ISR’s quality and safety agenda, and especially functions as convener of and facilitator for continental, regional and national radiation protection quality and safety.

**Members** of the ISRQSA are indicated on the below world map.*

The **overarching objective** of the ISRQSA is to establish a strategic plan for global efforts related to quality and safety, which reflect the input of the campaigns. The specific goals of the ISRQSA will embrace contributions towards

• justification and optimization,
• education,
• equipment performance,
• regulatory guidance,
• effective communication, as well as
• research related to medical imaging radiation protection.

To achieve its goals, the ISRQSA works in collaboration with other relevant organisations in the domain of safety and quality, including the IAEA, WHO, IRPA and ICRP as well as global professional organisations of related disciplines.

**Tasks** of the ISRQSA include:

• Identification of the current needs of the campaigns for the ISRQSA action plan,
• Facilitation of communication and exchange between existing campaigns and support for the development process of new campaigns,
• Proposing actions to ISR and contribution to ISR’s activities (website, newsletter, educational activities, etc.), and
• Representing ISR with IAEA, WHO, IRPA, and ICRP.
